

Abstract

The invention is a customizable "hot list" used in connection with drop-down list boxes on web-based forms. The customizable hot list appears on the user's screen when activated, e.g., when a drop-down list box is clicked with the right mouse button. This hot list presents a subset of the items contained within the drop-down list box, as selected by the user. The contents of the hot list may be determined entirely by the user via configuration of a "Preferences" menu option.
